Build 2026

Installation guide for **Meta Quest 3**

1) Create a developer Account

▸ Got to: https://developer.oculus.com/manage/organizations/create/

▸ Create an organization and type in any organization name and activate „I understand"

▸ Finally submit by clicking on the green button

2) Quest 2 + Quest 3 Smartphone app

Download the Quest 2 or Quest 3 smartphone app

▸ Apple iOS: https://apps.apple.com/de/app/meta-quest/id1366478176

▸ Android: https://play.google.com/store/apps/details?id=com.oculus.twilight

▸ Log in with your credentials you just have created in step 1):

   ▸ Your email and your password

▸ Then pair the Smartphone App with your Quest 2 or Quest 3

▸ In the smartphone app:

   ▸ When both devices are connected click on the Quest 2 or Quest 3 picture at the top of the app

   ▸ Click on **Headset settings** / **Developer mode** and switch the button to **on**

▸ In Quest 2 or Quest 3:

   ▸ **Restart** your Quest 2 or Quest 3 first

   ▸ After restart click on the battery and time symbol in the dock to open the "Quick Settings"

   ▸ Click on the "Settings" **gear wheel** symbol in the top right, then on **System** in the main settings selection (the first entry on the left) and then on **Developer** on the left side in the selection menu. Then click on **Enable Custom Settings**

▸ Your Quest 2 or Quest 3 is now in developer mode

3) Download & unzip the Magic Horizons VR software

- Use the download link which Magic Horizons has provided to download our VR software
- It will be a large file **in zipped format** like **90 to 100 GB**. Please make sure that you have a **good internet connection**. There must be **twice as much free space** on your internal or external hard disc on your PC or Mac when you unzip the file (approx. **190 GB+**)
- **Unzip** the downloaded file on your PC or Mac. Afterwards you can delete the zip file.
- Inside the unzipped "Deploy" folder you will see then 2 files:
    - The large Magic Horizons media storage folder (**90 – 100 GB**)
    - The APK (= the app) itself (approx. only **700 MB**)
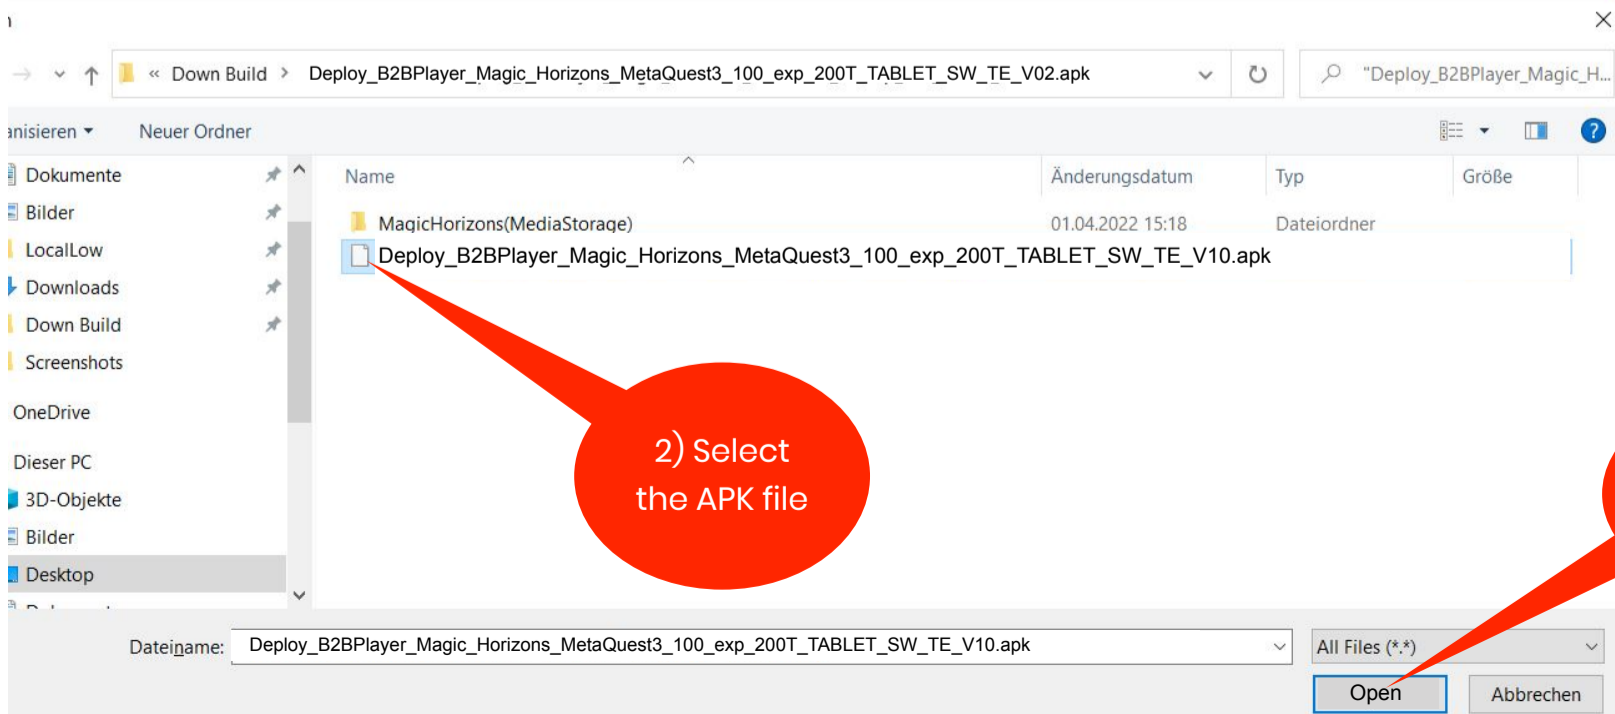

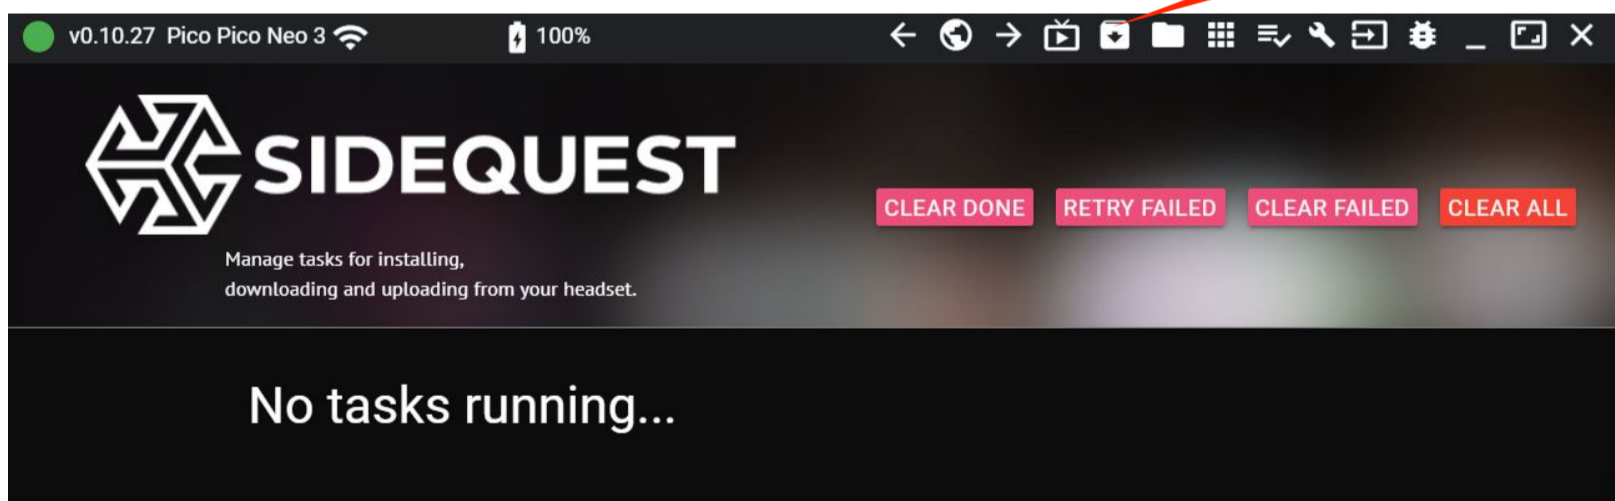

📁 MagicHorizons(MediaStorage)

📄 Deploy_B2BPlayer_Magic_Horizons_MetaQuest3_100_exp_200T_TABLET_SW_TE_V10.apk

4) Install Magic Horizons APK via SideQuest

Download Sidequest:

- Go to download Sidequest at: https://sidequestvr.com/setup-howto
- We recommend to use the **Advanced Installer** of Sidequest
- Connect your Quest 2 or Quest 3 via USB-C cable with a PC or Mac
- For a **Mac** you need a free program like Android File Transfer
- Inside Quest 2 or Quest 3 in **Notifications** in the dock at the left side appears a **blue dot**
- Click on the **Notification** and **allow** the USB connection to a PC or Mac
- Install the Magic Horizons APK as described with the program Sidequest
- In case an older Magic Horizons APK is already installed on the VR glasses please **uninstall this old version first** (described later)
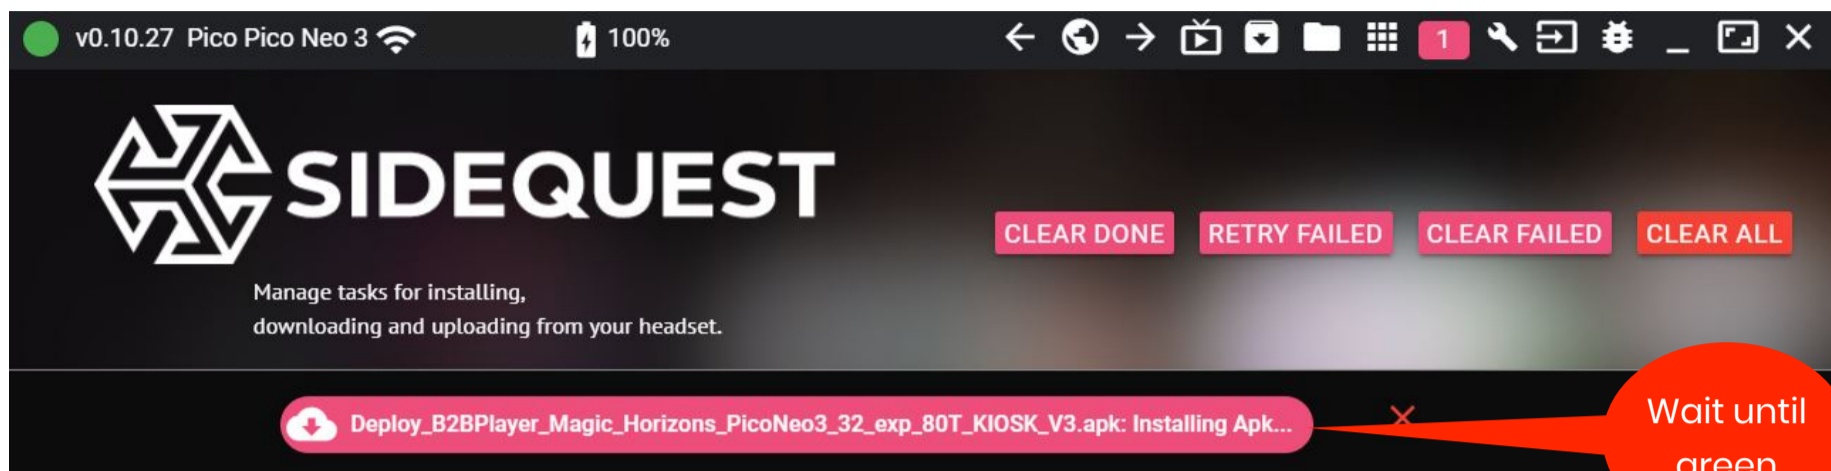

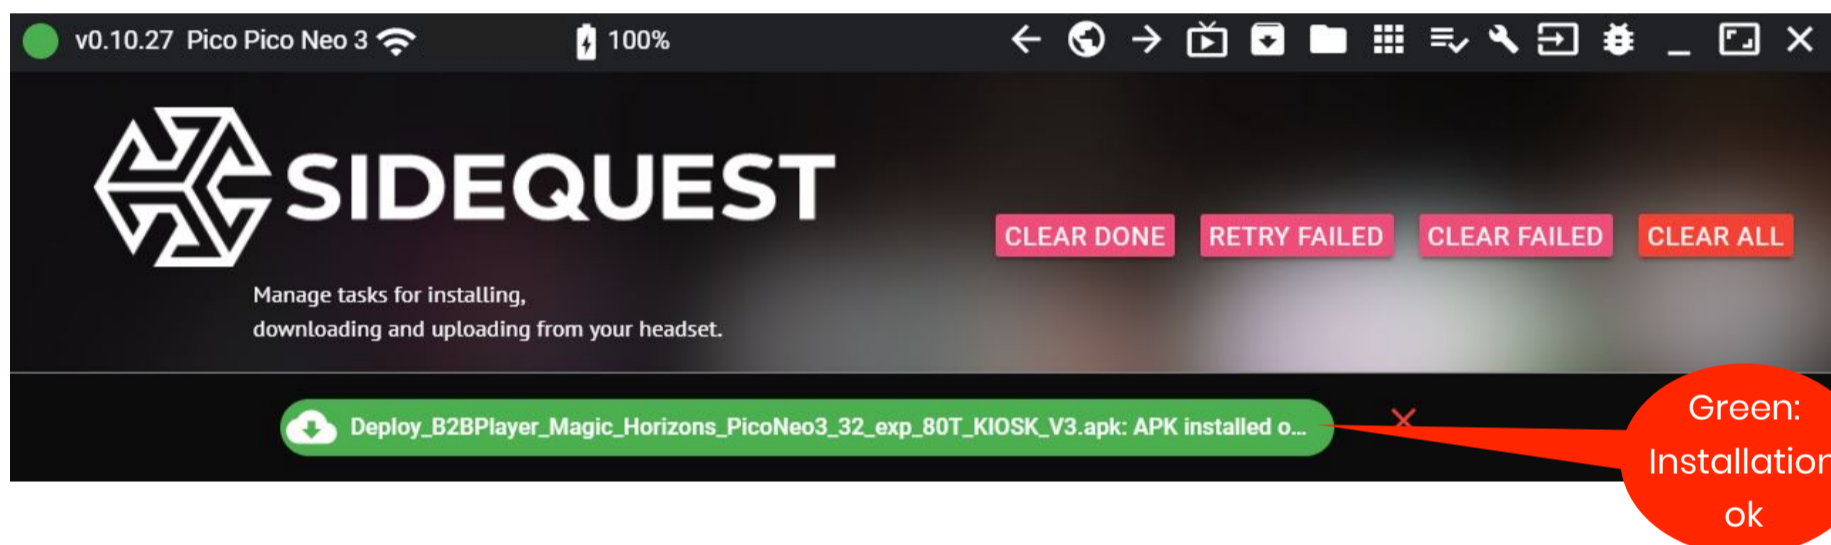

1) Install button

📁 MagicHorizons(MediaStorage)	01.04.2022 15:18	Dateiordner	
📄 Deploy_B2BPlayer_Magic_Horizons_MetaQuest3_100_exp_200T_TABLET_SW_TE_V10.apk			

2) Select the APK file

3) Press „open"

Dateiname: Deploy_B2BPlayer_Magic_Horizons_MetaQuest3_100_exp_200T_TABLET_SW_TE_V10.apk | All Files (*.*)

Open   Abbrechen
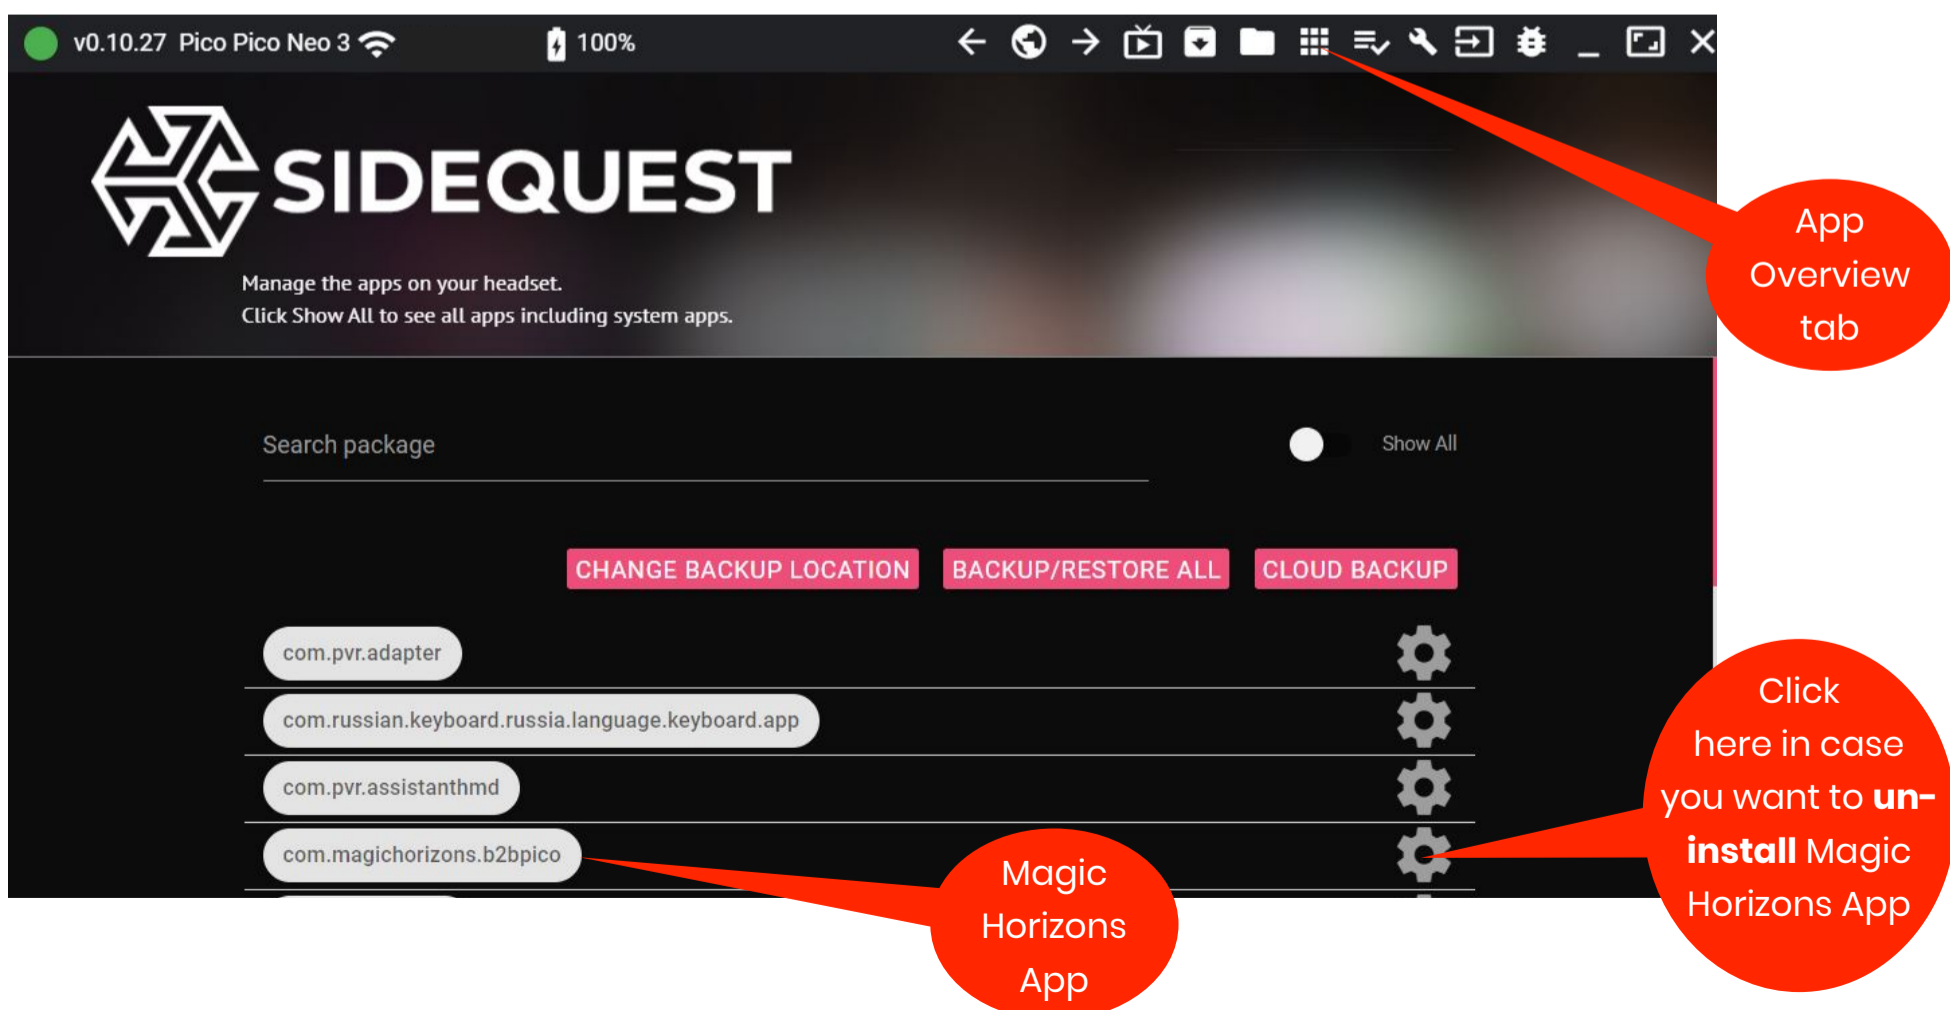

- Wait for approx. 2-3 minutes while the APP installation is in progress
- **Do not interrupt** the installation process and do not start any other tasks on your computer while the installation is running

Wait until green

- When the message jumps to **green** the installation is finished

Green: Installation ok

- Switch to "App Overview Tab" to see if the Magic Horizons App is installed

App Overview tab

Magic Horizons App

Click here in case you want to **un-install** Magic Horizons App
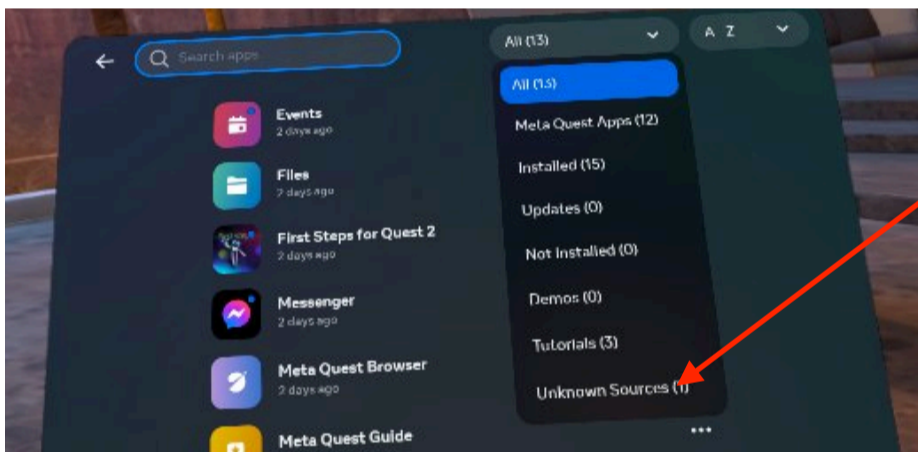

In the main Quest 2 or Quest 3 menu:
- 1) First click on the **App launcher** symbol in the dock
- 2) Then as step 2: click in the **search field**

2) Click in the search field

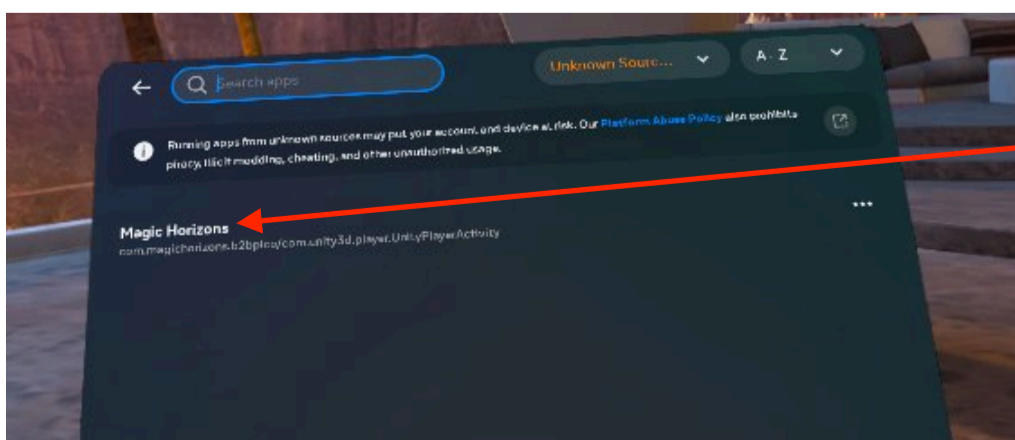

1) App launcher

- Activate **Unknown Sources** at the end of the list in the selection bar at the top

3) Click: „Unknown Sources"

Start the Magic Horizons app:
- After the Magic Horizons app has started the first time: type in the correct **license key** which you have received from Magic Horizons
- The license key consists of **4 digits, a hyphen** and again of **4 digits**, for example: y23g-14rt
- Please make sure to type in **exactly in this format** the numbers or letters **including the hyphen** of the license key
- Make sure that a **0** (= zero) and an **O** (= letter "O") as well as an **i** (= letter "i") or an **I** (= letter "I") are not mixed up
- It is mandatory to start the Magic Horizons app **first**: this will create the correct folders where to place the **Magic Horizons (MediaStorage)** folder in the next step

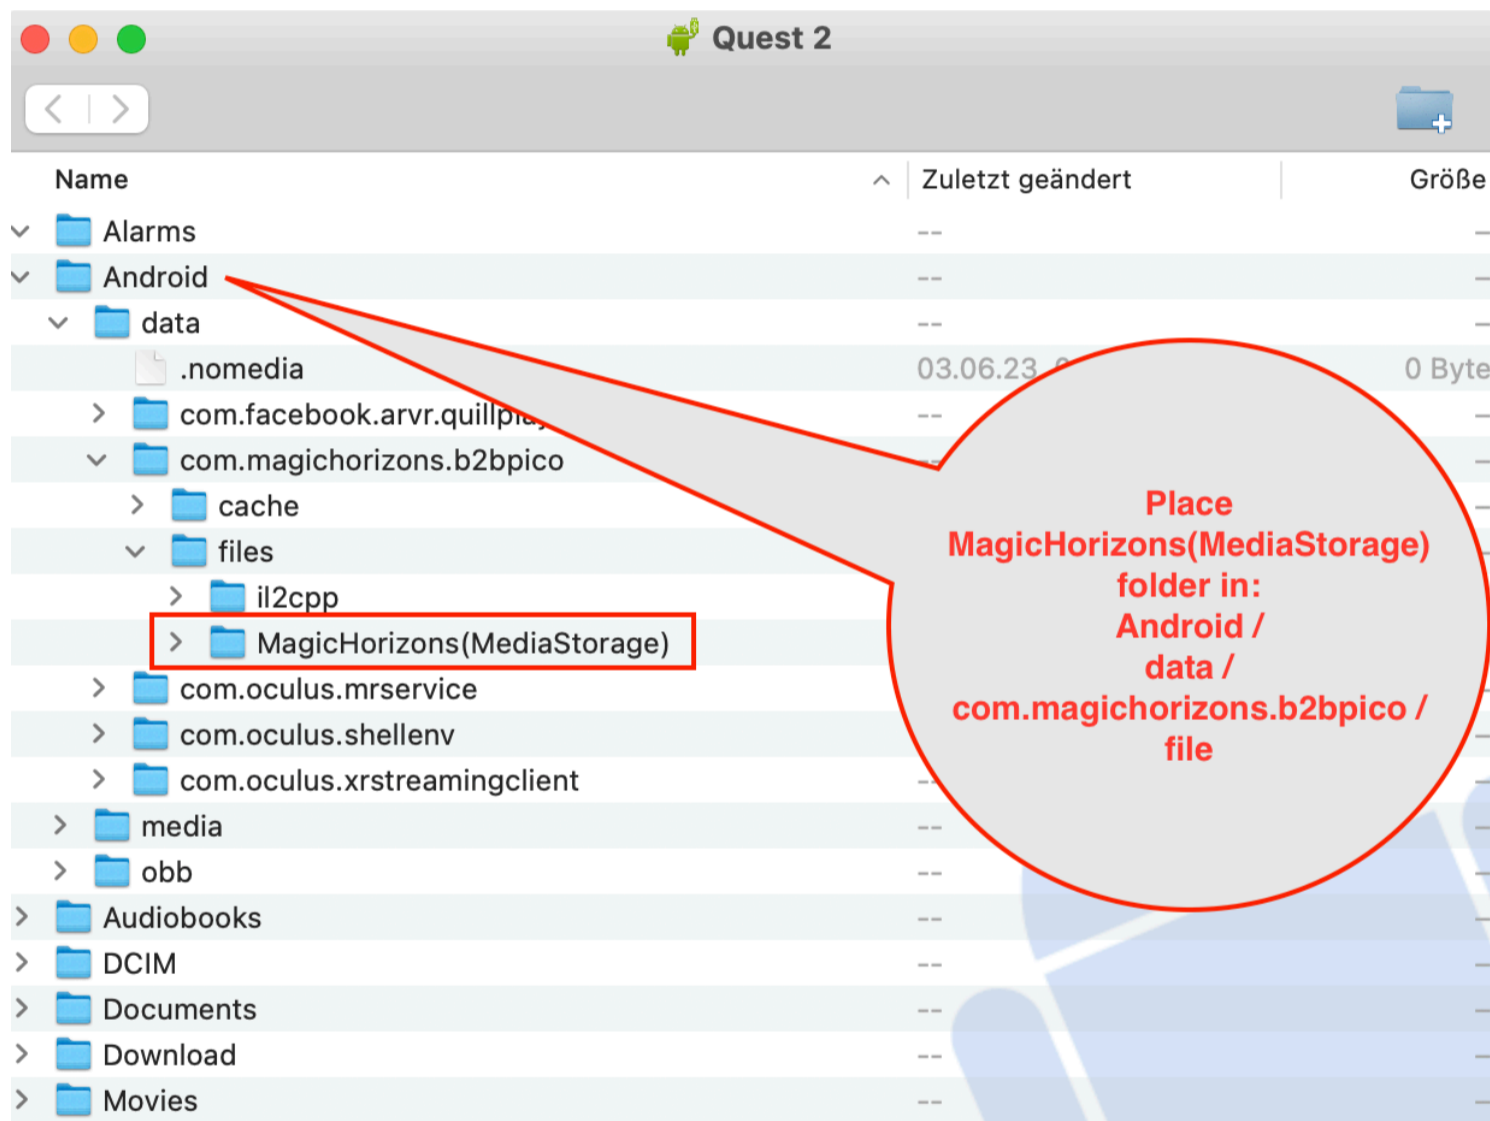

4) Start the Magic Horizons app

6) Install the Magic Horizons Media Storage folder

Installation of the **MagicHorizons(MediaStorage)** folder:

▸ Place the **MagicHorizons(MediaStorage)** folder exactly in: **Android** / **data** / **com.magichorizons.b2bpico** / **files**

▸ The **MagicHorizons(MediaStorage)** folder must be placed **exactly** in this location and must not be renamed: otherwise the Magic Horizons app would not work correctly.

7) Finishing the installation

After copying the Media Storage folder:

- Restart your Quest 2 or Quest 3 again by switching it off and on
- Start the Magic Horizons app as described in 5)
- When the permission prompt appears press: **Allow** to access the internal media.
- The prompt appears only for the first start. **Allow is important** - otherwise the media is not played back
- Then always use the same procedure to launch the Magic Horizons app:
  - Start the App launcher / Search Field /Unkown Sources / Magic Horizons App
  - Or use the **Magic Horizons symbol** in the **dock** to launch the app

Press: allow

- After a successful installation switch **off** the VR glasses by long pressing the On/Off button. Switch **on** the VR glasses again.
- Launch the Magic Horizons App
- Finally do a **quick check** in "Single Applications" : start one **nature video**, one **interactive application** and one **binaural beat** to see that the app and the corresponding content is loaded correctly.
