Build 2026

Installation guide for **Pico 4 ULTRA Enterprise**
(= Premium Plus)

THE STEPS IN THESE INSTRUCTIONS MUST BE FOLLOWED EXPLICITLY

1) Preparation: Developer Mode and newest PUI

- ‣ How to activate the developer mode inside the Pico 4 ULTRA Enterprise:
- ‣ In the Dock click on the **clock symbol** at the right: open **Control Center**
- ‣ Click on the **gear wheel** symbol in the upper right of the Control Center or if your VR glasses are in **Kiosk Mode double click** the **home button** on the controller to open the Pico "Quick settings" menu. In the "Quick settings" menu click on the **gear wheel** symbol at the top right.
- ‣ In the Pico settings go to: **Settings** (then scroll down the list at the left side) / **About** (scroll down the right side) / **Software Version**: **Click 10 x on the software number**
- ‣ On the left side at the very bottom of the list a new entry **Developer** appears
- ‣ **Update PUI**: Go to Settings (at the left side) / System Update and update the PUI if needed,. Therefore the Pico 4 Ultra Enterprise must be in your WiFi.

2) Download & unzip the Magic Horizons VR software

▸ Use the download link which Magic Horizons has provided you via email to download our VR software.

▸ It will be a large file in **zipped format** like **90 to 100 GB**. Please make sure that you have a **good internet** connection.

▸ There must be **twice as much free space** on your internal or external hard disc on your PC or Mac when you unzip the file (approx. **190 GB+**).

▸ **Unzip** the downloaded file on your PC or Mac. You can delete the Zip file afterwards.

▸ Inside the unzipped "Deploy" folder you will see then **2 files**:
  ▸ The Magic Horizons media storage folder (which has approx. **90 – 100 GB**).
  ▸ The APK (= the app) itself, which has approx. only **700 MB**.

📁 MagicHorizons(MediaStorage)
📄 Deploy_B2BPlayer_Magic_Horizons_Pico4ULTRA_100_exp_200T_TABLET_SW_TE_V10.apk

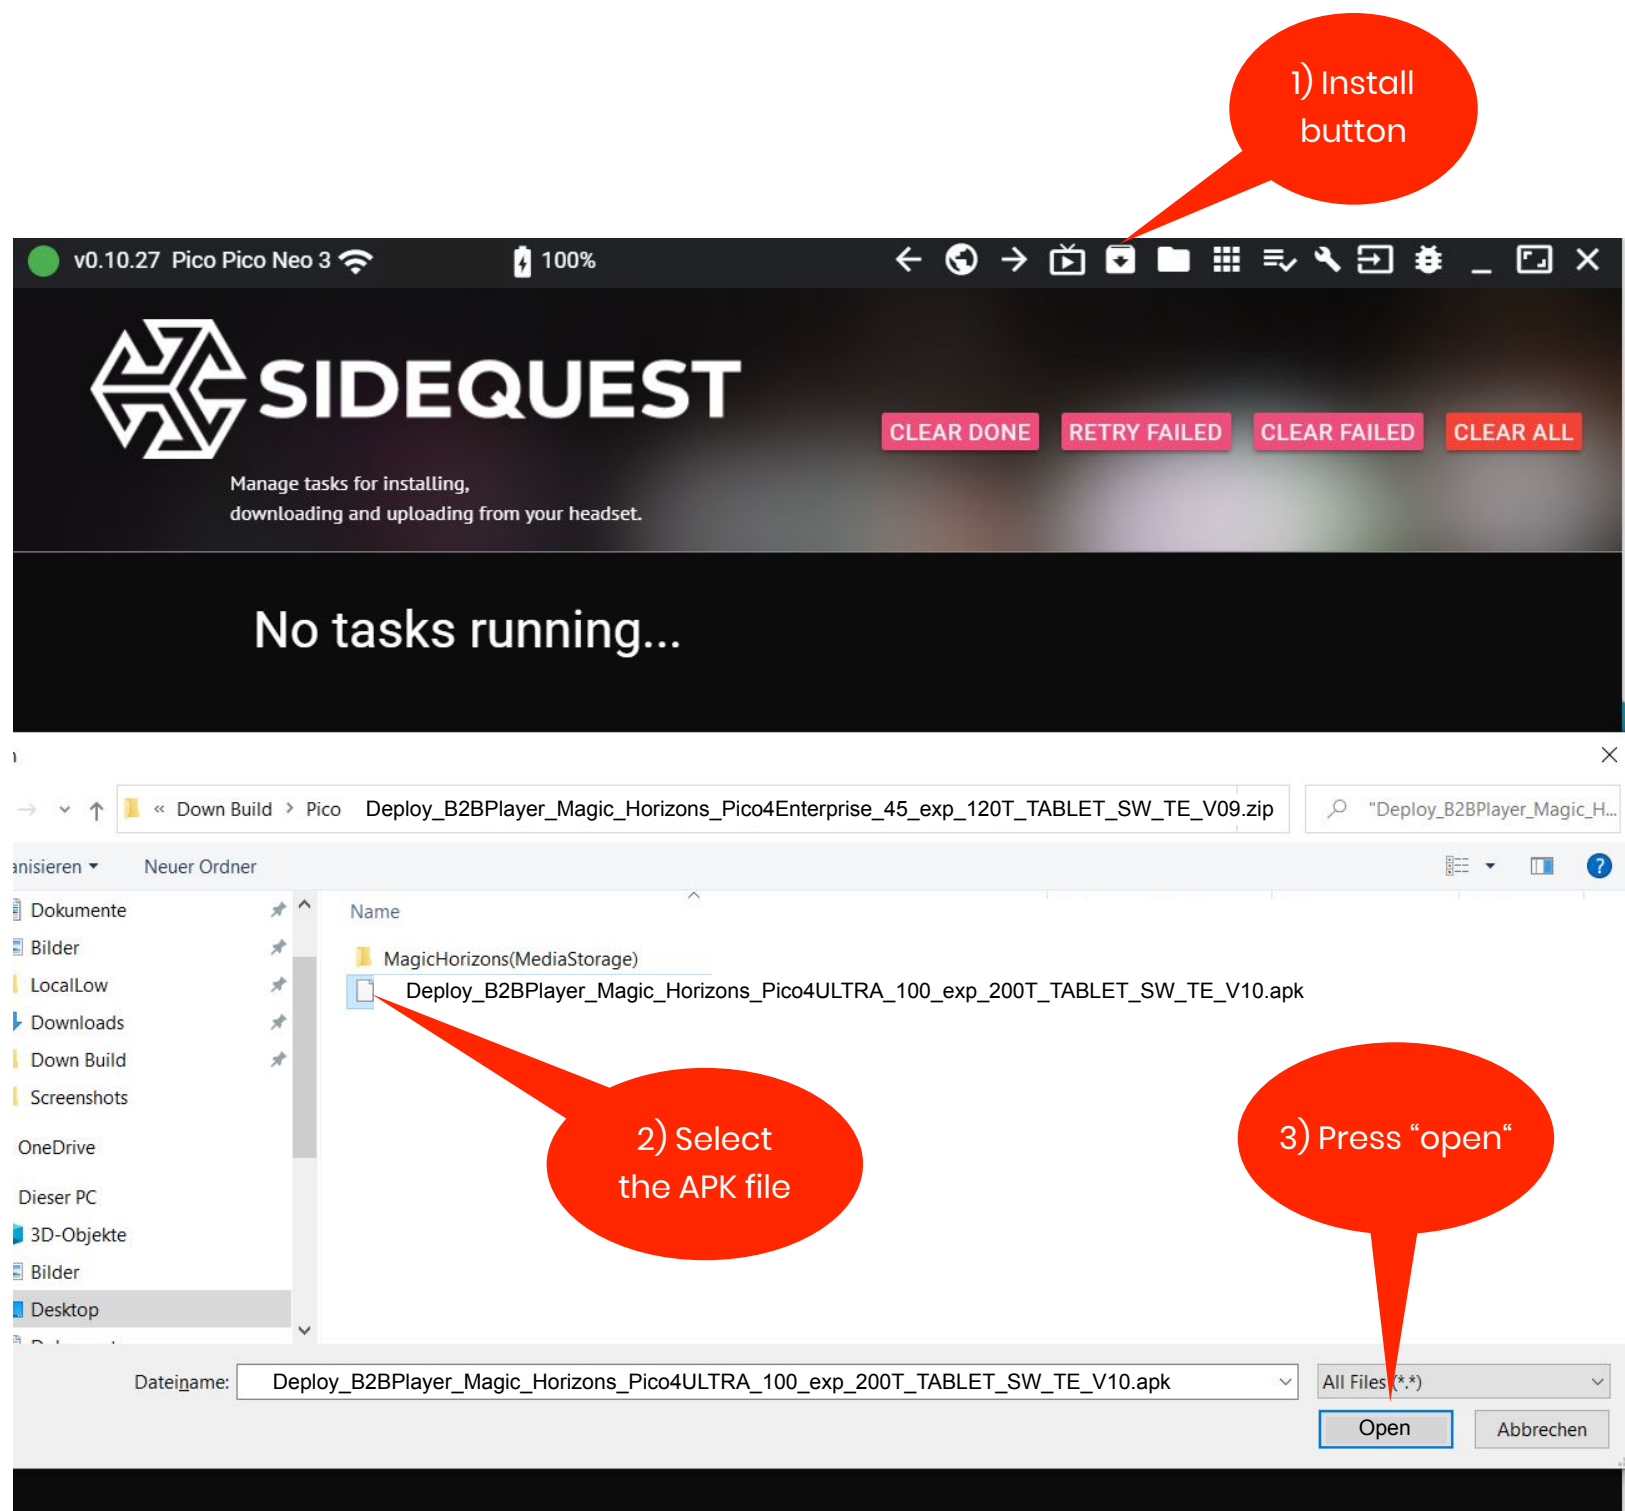

3) Download Sidequest + connect Pico VR glasses

▸ For installing the APK (= the app itself) you need the free program **Sidequest.**

▸ We recommend to use the **Advanced Installer** of Sidequest.

▸ For Windows PC or Mac download **Sidequest** here: https://sidequestvr.com/setup-howto

▸ Connect the **Pico 4 ULTRA Enterprise** via USB-C to your PC or Mac.

▸ For a **Mac** you need a free program like Android File Transfer.

▸ Start the **Sidequest** program on your PC or Mac.

▸ Wait until **Sidequest** has detected the Pico 4 Enterprise.

▸ You see a **green** indicator at the top left showing that the VR glasses are successfully connected.

🟢 v0.10.27 Pico 4 ULTRA 📶   🔋 100%   ← 🌐 → 📺 ⬇ 📁 ▦ ≡✓ 🔧 ⤴ ⚙
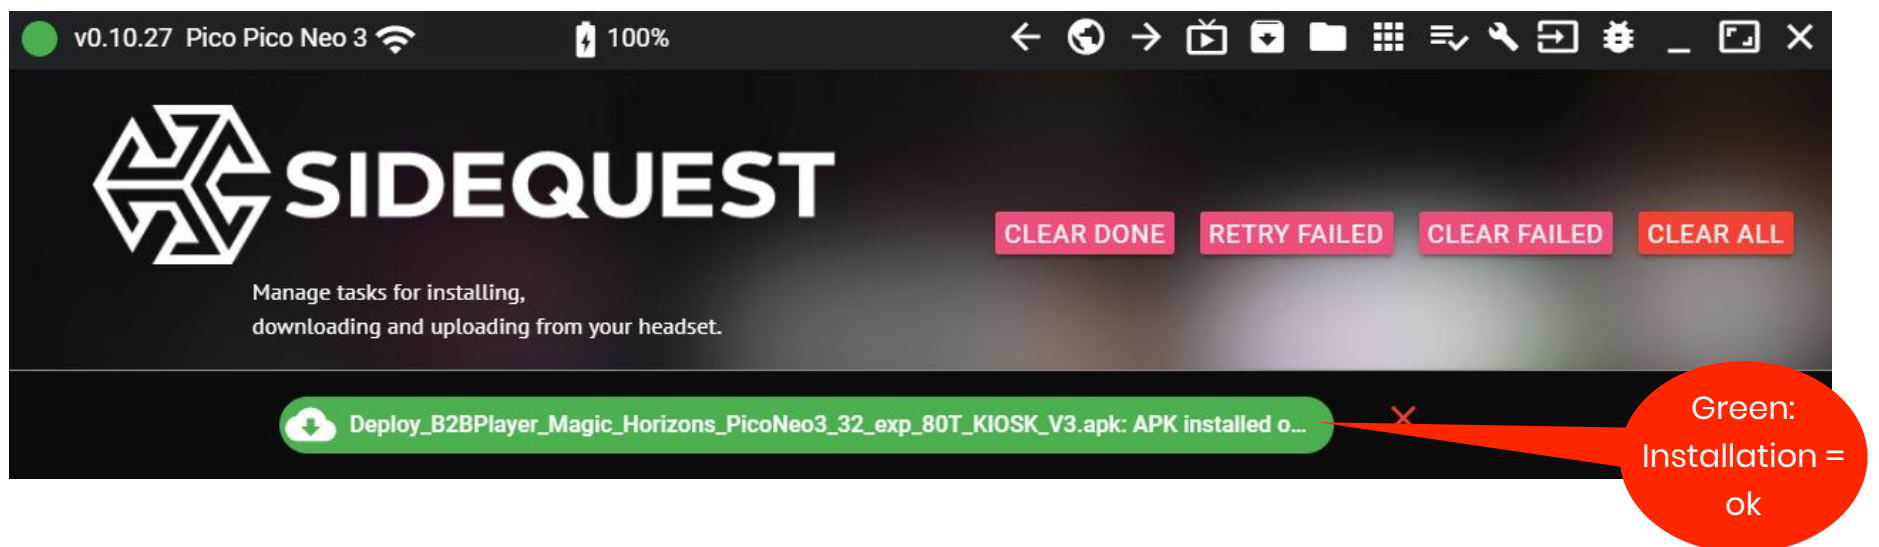

4) First: install the Magic Horizons APK via SideQuest

▸ It is **mandatory** that the Magic Horizons App (= the APK file) is installed **first** on the VR glasses.

▸ Click on the **Install** button of **Sidequest**.

▸ Select the "Deploy_B2BPlayer_Magic_Horizons … .**apk**" file on your PC or Mac.

▸ In case an older Magic Horizons APK is already installed on the VR glasses please uninstall this old version first (described on page 5).

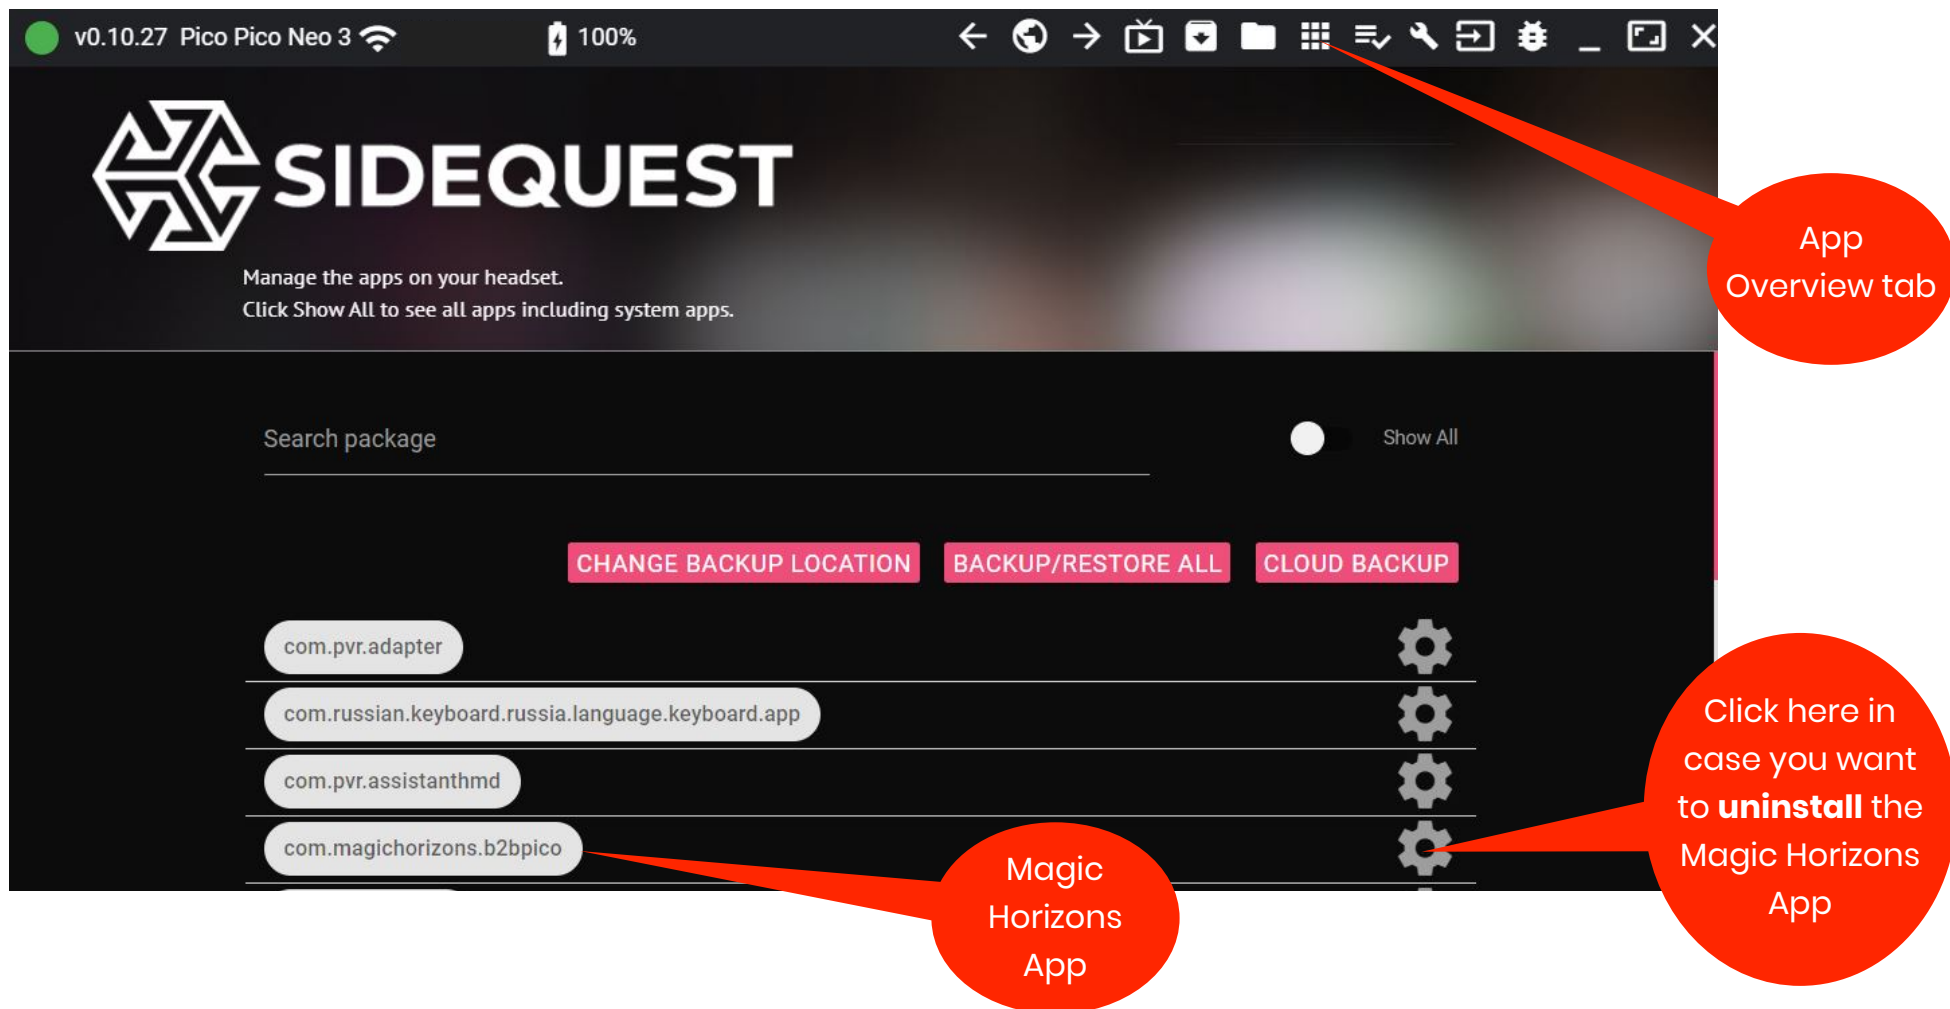

1) Install button

2) Select the APK file

3) Press "open"

- Wait for approx. 2-3 minutes while the APK installation is in progress.
- **Do not interrupt** the installation process and do not start any other tasks on your computer while the installation is running.

- When the message jumps to **green** the installation is finished.

▸ Switch to "App Overview Tab" to check that the Magic Horizons App is installed.

App Overview tab

Magic Horizons App

Click here in case you want to **uninstall** the Magic Horizons App

Important: then **restart** the VR glasses by switching them **off and on again** (= press long the on/off switch both times)
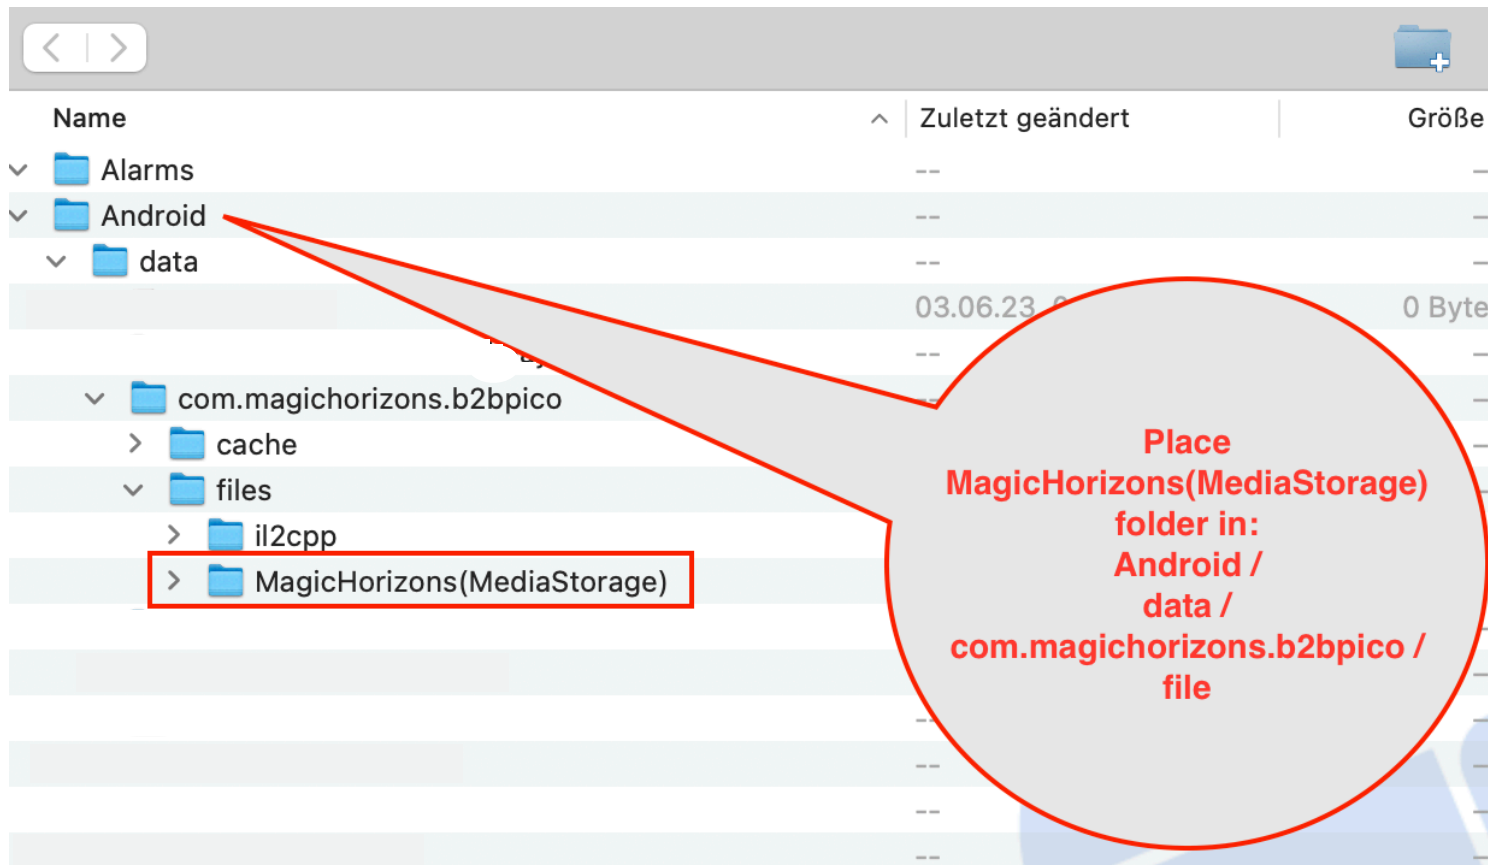

5) Kiosk Mode and Encrypted version with license key

▸ Start the Magic Horizons app manually from your **app library browser** if not in Kiosk Mode.
▸ To put the Magic Horizons App into **Kiosk mode**:
  ▸ Click on the dock on the **settings menu symbol** (= gear wheel).
  ▸ Go to **Developer / Business Settings / Home Screen**.
  ▸ Here select the **Magic Horizons App** as Home screen (= **Kiosk**) app if you want to run it in Kiosk mode.
  ▸ **Important:** After selecting the Magic Horizons App as Home screen (= Kiosk) you have to **restart** the VR glasses **manually.**

▸ If you have an **Encrypted** Magic Horizons VR software: type in the **license key** you received from Magic Horizons. This is mandatory **after the first start** of the Magic Horizons software.
▸ The license key consists of **4 digits**, **a hyphen** & again of **4 digits**, for example: **y23g-14rt**.
▸ The license key consists only of **small letters** and **numbers.**
▸ The license key must be typed in the VR glasses **exactly in this** format.
▸ Do not forget the **hyphen** between the two blocks of the four digits.
▸ Make sure that an **0** (= zero) and an **O** (= letter "O") as well as an **i** (= letter "i") and an **I** (= letter "I") are not mixed up.

6) Second: install the Media Storage folder

After the Magic Horizons APK is installed the second step is the installation of the
Magic Horizons (MediaStorage) folder:

▸ Place the MagicHorizons(MediaStorage) folder in: **Android / data / com.magichorizons.b2bpico / files.**
▸ The MagicHorizons(MediaStorage) folder must be placed **exactly** in this location and must not be renamed - otherwise the Magic Horizons app would not work correctly.

▸ After a successful installation of the Media Storage folder switch **off** the VR glasses by long pressing the On/Off button.
▸ Switch **on** the VR glasses again by long pressing the On/Off button.
▸ If the Magic Horizons App is not in Kiosk (Home) mode start the Magic Horizons app in the app library launcher.
▸ Finally do a **quick check** in "Single Applications" : start one **nature video**, one **interactive application** and one **binaural beat** to see that the app and the corresponding content is loaded correctly.
